A;Title: Complete sequence of Euglena gracilis chloroplast DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A;Cross-references: UNIPROT:Q92H23; GB:AE006914; PIDN:AAL03487.1; PID:g15620060; GSPDB:G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A. Accession: 534908
A. Status: nucleic acid sequence not shown; translation not shown
A. Molecule type: DNA
A. Molecule type: DNA
A. Residues: 1-54 «HAL2»
A. Cross-references: EMBL:X70810; NID:g415327; PIDN:CAA50122.1; PID:g415778
A. Note: the nucleotide sequence was submitted to the EMBL Data Library, January 1993

A,Title: Isolation of a cDNA clone for transition protein 1 (TP1), a major chromosomal p. A; Recession: A29095; MUID:88005793; PMID:2820847

A,Recession: A29095

A,Molecule type: mRNA

A,Residues: 1-55 AELS

A,Accession: A29095

A,Molecule type: MNA

A,Reference number: JS0109; MUID:89252920; PMID:2524424

A,Accession: JS0109

A,Molecule type: DNA

A,Residues: 1-55 AELS

B69189
connerved hypothetical protein MTH67 / MTH82 - Methanobacterium thermoautotrophicum
C; Species: Methanobacterium thermoautotrophicum
C; Species: Methanobacterium thermoautotrophicum
C; Decension: B69189; B69209
C; Accession: B69189; B68209

Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.

Claim 17; Page 106; 166pp; English.

activity or for potentiating antimicrobial agants active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XEBZENEXE and its derivatives selected from XEBZENEXE, BXZXZB, XEBZZEBX and BBXZBBZZ; and (b) as second peptide template XEBXX and their derivatives selected from the group consisting of XBBXBBX, BXXEXB, XBBZXBBX and BBXZBBZZ; and (b) as second peptide template XBBXX and their derivatives selected from the group consisting of XBBXBBX, BXBEXXB, BXBZXXBB, XBBZXXBB, ABZZKBB, ABZZKBB, ABZZKBB, ABZZBZ, and (b) at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acid; and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of The present invention describes an antimicrobial peptide (AP) for direct

the present invention describes an animarcobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an animo acid sequence selected from the group consisting containing an animo acid sequence selected from the group consisting as escend form XZBBZBXBXB and its derivatives a second peptide template XBBXXXBB, XBBXXBBX and their derivatives selected from the group consisting of XBBXBBX, ABBXXBBX, BBXXXBBX, BBXXXBB, and XBBXXBBXXBBXXBBX, where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acid. The peptides can be used to treat bacterial and fungal infections. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of apoptosis of microbial cells. AAY57463 to AAAY5757 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                              ö
are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention describes an antimicrobial peptide (AP) for direct
                                                                                                                                                                                                              Gaps

                             ABG69923;
  The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXEBXB and its derivatives selected from XZBBZBXBXB, BXZXXXB, XBBXZBBXB and BBXZBBXZ; and (b) a second peptide template XBBXXBX, BXBXXBBS and BBXZBBXZ; and (b) a second peptide template XBBXXBBX, BXXBXSB, BXBBXXBB, and Consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBZXXBB, and consisting of XBBXBBX, XBBXXBBX, BXXBXXB, ABBZXXBB, and Consisting of XBBZBBX, ABBXXBBX, BXBXXBB, and consisting of XBBZBBX and their derivatives selected from the amino acid, and where B = at least one positively charged amino acid, and where B, X and Z man and a fungal infections. The peptides can be used to treat bacterial and fungal infections. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AX57463 to AAX5757 represent sequences

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from FMP-1 and PMP-2, platelet microbiocidal protein), and retromers. From FMP-1 and PMP-2, platelet microbiocidal protein), and retromers. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and funsions; and (2) antimicrobial peptides for potentiating antimicrobial activity of leukocytes against organisms such as individual antimicrobial agents, agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in the foods and cosmetics and as agents to improve efficiency of molecular belongy techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short belong are based upon natural antimicrobial peptides that have potent and broad spectrum activity against perhapses exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and expected the exhibiting multiple antibiotic resistance. They exhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acid core sequence (derived from 150 amino acid cores sequence (derived from PMP-1 and PMP-2, platelet microbioidal protein), and retromers.

Eventuations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and funsions; and (2) antimicrobial peptides for potentiating antimicrobial against organisms such as bacteria and fungi. The leukocytes against organisms such as individual antimicrobial agents frate mhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial agents (conventional antimicrobials, agents that enhance the antimicrobial or functions of leukocytes, as disinfectants or preservatives for use in thoology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short based upon natural antimicrobial peptides of prior art have generally convention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibicit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                             Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-10 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbioidal protein), and retromers.

Eventuations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial apeptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial agents bacteria and fungi. The antimicrobial peptides are useful as individual antimicrobial agents that enhance, potentiate or restore efficiacy of conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short been considered to have undesirable toxicity, immunogenicity and short are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides that have potent and prode resistance. They exhibit lower inherent mammalian cell toxicity and short internal expense control of are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides and expense inherent mammalian cell toxicity and short invention are based upon natural antimicrobial and antimicrobial antimicrobial and antimicrobial and antimicrobial and antimicrobial antimicrobial and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                      Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;

crivity or for potentiating antimicrobial agents active against corganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting an amino acid sequence selected from the group consisting as elected from XZBBZBXBXB and its derivatives selected from XZBBZBXBXB, BXZXZB, XBBXXXBX and BBXZBBXZ; and (b) a second peptide template XBBXXXBX, XBBXXXBX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBX, BXXBXB, BXXBXXB, and KBBZXXBBX, where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides also increase the antimicrobial activity of apoptosis of microbial cells. ANSTAST represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an antimicrobial peptide (AP) for direct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.
                                                                                                                                                                                                                            Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 25;

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acid corre sequence (derived from FMP-1 and PMP-2, platelet microbicidal protein), and retromers.

Truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide of 13-74 containing an amino acid core sequence selected from truncations and fusions; and (2) antimicrobial peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of leukocytes against organisms such as bacteria and fungi. The antimicrobial peptides are useful as individual antimicrobial agents that enhance, potentiate or restore efficacy of conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular biology techniques. Antimicrobial peptides of prior art have generally compared to have undesirable toxicity, immunogenicity and short care based upon natural antimicrobial peptides of prior art have generally conventions are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides of prior art have generally contriberance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antimicrobial peptide composition for the prevention and treatment of setions caused by organisms, such as bacteria and fungi, exhibiting

The present sequence is that of Prolider 1 (F1-1), a pipting an introduction with distinct effector and activator domains. PT-1 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like peptide effector (interleukin-8 domain) and an activator site specific for staphylococcus VB protease. PT-1 was designed to be cleaved into 2 distinct effectors in the presence of VB protease. In particular, it was designed to exert antimicrobial activity less than that of RP-1 in the absence of VB protease produced by Staphylococcus aureus. Thus, PT-1 was designed to exert optimal antimicrobial activity in the context of infections due to staphylococcus activated in the context of infections due to staphylococcus ells elaborating that have 2 or was protease. PT-1 was synthesised by solid-phase synthesis It is an example of context-activated protides of the invention that have 2 or more effectors with individual distinct biological functions and one or corresponding activator sites that can each initiate or amplify the biological function of one or more effectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    present sequence is that of Protide-1 (PT-1), a peptide antibiotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

and retromers, extensions, combinations and fusions; and (2)
antimicrobial peptides for potentiating antimicrobial activity of
leukocytes against organisms such as bacteria and fungi. The
antimicrobial peptides are useful as individual antimicrobial agents,
specifically against bacteria and fungi, agents in combination with other
antimicrobials, agents that enhance, potentiate or restore efficacy of
conventional antimicrobials, agents that enhance the antimicrobial
functions of leukocytes, as disinfectants or preservatives for use in
codes and comenties and as agents to improve efficiency of molecular
biology techniques. Antimicrobial peptides of prior art have generally
been considered to have undesirable toxicity, immunogenicity and short
are based upon natural antimicrobial peptides of the present invention
are based upon natural antimicrobial peptides that have potent and broad
spectrum activity against pathogens exhibiting multiple antibiotic
resistance. They exhibit lower inherent mammalian cell toxicities and
overcome problems of toxicity, immunogenicity, and shortness of duration
of effectiveness due to blodegradation, retaining activity in plasma and
serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acide containing a 7-13 amino acid core sequence (derived from PMP-1 and DMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity
                                                                                                                                                                                                                                                         New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              / Match 100.0%; Score 87; DB 5; L. ```
The present sequence is that of Protide-2 (PT-2), a peptide antibiotide with distinct effector and activator domains. PT-2 contains a C-terminal cantimicrobial peptide effector (RP-1), an N-terminal chemokinae-like peptide effector (interleukin-8 domain) and an activator site specific peptide effector (interleukin-8 domain) and an activator site specific (for C3 convertase, a complement fixing protease. PT-2 is cleaved into 2 distinct effectors in the presence of G3 convertase. In particular, it was designed to exert antimicrobial activity less than that of RP-1 in the presence of G3 convertase. Thus, PT-2 was designed to exert coptimal activity in the complement system, which is part of the innate immune response to antigen exposure. PT-2 is an example of context-activated protides of the invention that have 2 or more effectors with individual distinct biological functions and one or more effectors with individual distinct biological functions and one or biological function of one or more effectors upon context activation. The productions are useful in the diagnosis, prophylaxis and therapy of a broad crange of pathological conditions.
                                                                                                                                                                                                                                                                        New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present sequence is that of Protide-4 (PT-4), a peptide antibiotide with distinct effector and activator domains. PT-4 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokina-like peptide effector (interleukin-8 domain) and an activator site specific peptide effector (interleukin-8 domain) and an activator site specific for matrix metalloproteinase MMP-9, which is produced to dissolve the cissue infromt of the growing blood vessel thip to allow for its continued tissue invasion. PT-4 was designed to be cleaved into 2 distinct effectors in the presence of MMP-9. In particular, PT-4 exerts artineoplastic and/or antimicrobial activity less than that of RP-1 in the presence of MMP-9, but equivalent to or exceeding that of RP-1 in the presence of MMP-9, but equivalent to or exceeding that of RP-1 in the presence of MMP-9, the context of new blood wassel formation. PT-4 extinction and an example of context-activated protides of the invention and one or more effectors with individual distinct biological functions and one cor more corresponding activator sites that can each initiate or amplify the biological function of one or more effectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad range of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2;

AAY57504;

(first entry) 25-FEB-2000 Antimicrobial peptide RP-1-10F SEQ ID NO:42.

Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis. 

Synthetic.

Oryctolagus cuniculus.

```
The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acide corts sequence (derived from FNP-1 and PMP-2, platelet microbical protein), and retromers.

CC PMP-1 and PMP-2, platelet microbical protein), and retromers.

CC PMP-1 and PMP-2, platelet microbical protein), and retromers.

CC truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fundions; and (2) antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides for potentiating antimicrobial agents, combination with other containing apprinces that enhance the antimicrobial agents of conventional antimicrobials, agents to improve efficiency of conventional antimicrobials, agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short care based upon natural antimicrobial peptides of prior art have generally biology techniques. Antimicrobial peptides of prior art have generally considered to have undesirable toxicity, immunogenicity, and short are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic creasserance. They exhibit lower inherent mammalian cell toxicity, immunogenicity, and shortness of testerore problems of toxicity, immunogenicity, and shortness of effectiveness due to biodegradation, retaining activity in plasma and companies.
                                                                                                                                                                          New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 83; DB 5; I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXBXB, BXXZXB, XBBXXZBX and BBXZBBXZ; and (b) a second peptide template XBBXX BX ABBXXBXB and and second peptide template XBBXXBXB, XBBXXBBX, BBXXBBX, BBXXBXB, and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBZXXBB, and CABAXBBXZBBX; where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides can be used to treat bacterial and fungal infections. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AX757463 to AAX5757 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                  Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                        organisms such a potential during the promptises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template SAZBARSKAB and its derivatives selected from XZBAZBARSK, BAZXXZB, KAZBAZXBAR and its derivatives as elected from XZBAZBARSK, BAZXXZBA AND BBAZZBBX; and (b) a second peptide template XBRXX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, XBBXXXBBX, XBBXXXBBX, Merce B = at least one positively charged amino acid; X = at least one aromatic amino acid, and where B, X and Z amy be separated by one or more other amino acid. The peptides can be used to treat bacterial and fungal infections. The peptides last increase the antimicrobial activity of neutrophils. The peptides overall effect callular disruption and rapid apoptosis of microbial cells. ANYSY463 to AAX57557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                     The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acid core sequence (derived from 150 amino acid acore sequence (derived from 150 acid actions), and retromers. The possible structures are fully described in the specification. Also included are (1) an antimicrobial agents active against organisms such as action for potentiating antimicrobial agents active against organisms such as activities and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations and fusions; and (2) antimicrobial peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides are useful as individual antimicrobial agents. Conventional apprides are useful as individual antimicrobial agents that enhance the antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial activity of conventional antimicrobials, agents that enhance the antimicrobial for antimicrobials, agents to improve efficiency of conventional antimicrobials, agents to improve efficiency of molecular foods and cosmetics and as agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides of the resistance. They exhibit lower inherent mammalian cell toxicities and cosmetive and evoluted are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic cresistance. They exhibit plower inherent mammalian cell toxicity, immunogenicity, and secure are based upon actu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
          ŏ
New antimicrobial peptide composition for the prevention and treatment infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZENEXE and BRXZENEXING SERZENEXES and BRXZENEXING SERZENEXES and BRXZENEXING SERZENEXES and ENGREDIA AND SERZENEY SERZENEY AND SERZENEY SERZENEY SERZENEY AND SERZENEY SERZENEY AND SERZENEY S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antimicrobial, platelet microbiocidal protein, PMP-1, PMP-2, bacterial infection, fungal infection, fungicide, disinfectant, preservative, foods, cosmetic, multiple antibiotic resistance, rabbit,
                                                                                                                              Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rabbit platelet microbicidal protein, PMP-2, based peptide #39.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  93.1%; Score 81; DB 2; Length 18; 94.4%; Pred. No. 0.00013;

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-60 against organisms such as bacteria and fungi comprising a peptide of 5-100 amino acid a containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbical protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial agents active against organisms such as or for potentiating antimicrobial agents active against organisms such as antimicrobial peptides (13-4 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of leukocytes against organisms such as individual antimicrobial apprides are useful as individual antimicrobial agents that enhance potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial are in foods and cosmetics and as agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular codes and cosmetics and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short been considered to have undesirable toxicity, immunogenicity and short conventions are based upon natural antimicrobial peptides of prior art have generally been considered to bave undesirable toxicity, immunogenicity, and shortness of testitance. They exhibit lower inherent mammalian cell toxicities and covercome problems of toxicity, immunogenicity, and shortness of defectiveness due to biodegradation, retaining activity in plasma and companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                       organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XRDEMENEAR and its derivatives selected from XRBEMENEAR, BENZEAR, KBENZERE and its derivatives as escond peptide template XRBEX. KBENZERE and second peptide template XBEX. MEXENSE, XBENZERE, and (b) a second peptide template XBEX. ABEX. MEXENSE, XBEXZERE, and XBEXZEREX. Where B = at least one positively charged amino acid; x = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides can be used to treat bacterial and fungal neutrophils. The peptides overall effect callular disruption and rapid apoptosis of microbial cells. AAYS7463 to AAS75557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                peptide (AP) for direct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
Antimicrobial peptides for potentiating antimicrobial agents active
                                                                                                                The present invention describes an antimicrobial peptide (AP) for activity or for potentiating antimicrobial agents active against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rabbit platelet microbicidal protein, PMP-2, based peptide #41.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 77; DB 2; Length 18;

PMP-1 and PMP-2, platelet microbiocidal protein), and retromers, cruncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or included are (1) an antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fungi. The antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides for potentiating antimicrobial activity of leukocytes against organisms such as bacteria and fungi. The applieds are useful as individual antimicrobial agents, agents that enhance, potentiate and restore efficacy of antimicrobials, agents that enhance the antimicrobial antimicrobials, agents that enhance the antimicrobial functions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular conventions of leukocytes, as disinfectants of prior art have generally been considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides of this present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic are based upon natural antimicrobial peptides that have potent and overcome problems of toxicity, immunogenicity, and shortness of effectiveness due to biodegradation, retaining activity in plasma and overcome problems of toxicity, immunogenicity, and setting activity in plasma and serum. The present sequence is a rabbit pwe based antimicrobial peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

The present sequence is that of Protide-3 (PT-3), a peptide antibiotide with distinct effector and activator domains. PT-3 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like peptide effector (RP-1), an N-terminal chemokine-like for thrombin. PT-3 was designed to be cleaved into 2 distinct effectors in the presence of thrombin. In particular, it was designed to exert antimicrobial activity less than that of RP-1 in the absence of thrombin, but equivalent to or exceeding that of RP-1 in the presence of thrombin. Thus, PT-3 exerts optimal antimicrobial activity in the context of thrombin as would be present in the setting of vascular injury or infection. PT-3 is an example of context-activated protides of the invention that have 2 or more effectors with individual distinct biological functions and one or more corresponding activator sites that can each initiate or amplify the biological function of one or more effectors upon context activation. The protides are useful in the effectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad range of pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The peptide has an alpha-halical structure and is believed to act as an ionophore, making holes in bacterial call membranes. The peptide and antibiotic act synergistically.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is an antibacterial peptide C18G, which was modified by adding a Cys-amide to the carboxy terminus. This was used to produce an immunoadapter conjugate. Making a conjugate comprises covalently linking a surface-binding ligand (SBL) to a hapten via a spacer to form a ligand-spacer-hapten (LSH) compound, and reacting the compound with immunoglobulin (1g) under conditions that allow for non-covalent binding of the Ig to the hapten of the compound. The conjugate can be used for sepsis, influenca, virenia or fungemia. They can also be used in neurology, cancer and endocrinology, where Ig targeting can provide desired therapeutic effects. The methods for producing a conjugate can unreactive Ig to microbial targets Ilgands to efficiently direct otherwise unreactive Ig to microbial targets. This targeting allows Ig to react with microbial structures that may not normally be accessible to Ig, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antimicrobial compens. for diagnosis and therapy - comprising microbial surface binding ligand-spacer-hapten, non-covalently associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a therapeutic formulation comprising N-
(phenylalanyl)-4-aminophenyl-alpha-D-mannopyranoside (I). Also described
is a method of treatment for bacterial disease comprising: (a) providing
cambiect with symptoms of bacterial disease with one or more fimbriae-
binding compounds comprising a mannose of an anomeric configuration, an
alpha-aromatic or heteroarcmatic ring attached to the mannose by a
clycosidic or pseudoglycosidic linkage and a functional group which
provides a site for chemical modification remote from the mannose and
pharmaceutically carrier; and (b) administering the fimbriae-binding
compounds can be used for treating subjects with symptoms of and for
subjects at risk from bacterial diseases. Treatment of and prevention of
blood-borne and toxin mediated diseases in particular sepsis in humans
can other animals can be carried out and the compounds may also be used
to identify bacteria according to their cell binding specificity's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Therapeutic formulation comprising N-(phenylalanyl)-4-aminophenyl-alpha-D-mannopyranoside or its cysteinyl derivative useful for diagnosing and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         through conjugation to reporter substances such as dyes, luminescent or lutorescent molecules and enzymes. The compounds also inhibit the agglutination of yeast cells induced by type 1 pili bearing bacteria. The present sequence is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                    Limulus antilipopolysaccharide factor; LALF; diagnosis; endotoxin; bacterial infection; antibacterial; fimbriae-binding compound; sepsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 66; DB 3; Length 18;

The present sequence is a peptide designated C19G. This was used to produce an immunoadapter conjugate. Making a conjugate comprises covalently linking a surface-binding ligand (SBL) to a hapten via a spacer to form a ligand-spacer-hapten (LSH) compound, and reacting the compound with immunoglobulin (IS) under conditions that allow for non-covalent binding of the Ig to the hapten of the compound. The conjugate can be used for the diagnosis, prevention and treatment of microbial infections, e.g. sepsis, influenca, viremia or fungemia. They can also be used in neurology, cancer and endocrinology, where Ig targeting can provide desired therapeutic effects. The methods for producing a signal
                                                                                                                                                                                                                                                                                                       conjugate can use small molecule targeting ligands to efficiently direct otherwise unreactive Ig to microbial targets. This targeting allows Ig to react with microbial structures that may not normally be accessible to Ig, or are incapable of stimulating antibody production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

cutivity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting containing an amino acid sequence selected from the group consisting selected from XZBBZBXBXB and its derivatives selected from XZBBZBXBXB BXZXZB, XBBXZXBX and BBXZBBX; and (b) a second peptide template XBBXXXB, XBBXXBBX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXBXXBB, BXBXXBB, and XBBZXXBBX, where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAYS7463 to AAAYS757 represent sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (phenylalanyl)-4-aminophenyl-alpha-D-mannopyranoside (I). Also described is a method of treatment for bacterial disease comprising: (a) providing campounds of treatment for bacterial disease comprising: (a) providing compounds of bacterial disease with one or more fimbriae-binding compounds comprising a mannose of an anomeric configuration, an alpha-aromatic or heteroaromatic ring attached to the mannose by a glycosidic or pseudoglycosidic linkage and a functional group which provides a site for chemical modification remote from the mannose and pharmaceutically carrier; and (b) administering the fimbriae-binding compound to the subject. Administration of one or more fimbriae-binding compounds can be used for treating subjects with symptoms of and for subjects at risk from bacterial diseases. Treatment of and prevention of blood-borne and toxin mediated diseases in particular sepsis in humans and other animals can be carried out and the in vivo neutralisation of the effects of endotoxin is also possible. The compounds may also be used to identify bacteria according to their cell binding specificity's through conjugation to reporter substances such as dyes, luminescent or fluorescent molecules and enzymes. The compounds also inhibit the agglutination of yeast cells induced by type 1 pili bearing bacteria. The present invention

This is a specific example of a cationic oligopeptide suitable for use in compositions with beta-lactam antibiotics. The peptide has an alphahelical structure and is believed to act as an ionophore, making holes in bacterial cell membranes. The peptide and antibiotic act synergistically. See AAR13924-R13930 and AAR13936-7. (Updated on 25-MAR,2003 to correct PA
                                                                                                                                                                                                                 Compsns. for treating infections sensitive to beta-lactam antibiotics -comprise beta-lactam antibiotic and cationic oligopeptide, useful against Enterobacteriaceae, Pseudomonas aeruginosa etc.
                                                                                                                                                                                                                                                                                                     Claim 17; Page 44; 64pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                       The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acide containing a 7-13 amino acide fore sequence (derived from PMP-1 and PMP-2, platelet microbiodial protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations of the peptides described above, and retromers, extensions, combinations and fungi. The classification peptides are useful as individual antimicrobial agents, agents useful as individual antimicrobial agents, specifically against bacteria and fungi, agents in combination with other antimicrobial peptides are useful as individual antimicrobial agents that enhance the antimicrobial agents (conventional antimicrobials, agents that enhance the antimicrobial peptides of protein and accountiation of leukocytes, as disinfectants or preservatives for use in foods and commercise and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic creatstance. They exhibit lower inherent mammalian cell toxicity, in plasma and considered to biodegradation, reteaning activity in plasma and considered to biodegradation, reteaning activity in plasma and considered to biodegradation, retaining activity in plasma and considered to biodegradation, retaining activ

Compsns. for treating infections sensitive to beta-lactam antibiotics - comprise beta-lactam antibiotic and cationic oligopeptide, useful against Enterobacteriaceae, Pseudomonas aeruginosa etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is a specific example of a cationic oligopeptide suitable for use in compositions with beta-lactam antibiotics. The peptide has an alphahelical structure and is believed to act as an ionophore, making holes in bacterial cell membranes. The peptide and antibiotic act synergistically. See AAR13924-R13930 and AAR13937. (Updated on 25-MAR-2003 to correct PA
                                                                                                                       numan platelet factor 4 C-13 fragment; amphipathic alpha helix.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
helical structure and is believed to act as an ionophore, making holes in bacterial cell membranes. The peptide and antibiotic act synergistically. See AAR13924-R13930 and AAR13936-7. (Updated on 25-WAR-2003 to correct PA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This is a specific example of a cationic oligopeptide suitable for use in compositions with beta-lactam antibiotics. The peptide has an alphahalical structure and is believed to act as an ionophore, making holes in bacterial cell membranes. The peptide and antibiotic act synexgistically. See AAR13924-R13929 and AAR13936-7. (Updated on 25-WAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Compans. for treating infections sensitive to beta-lactam antibiotics - comprise beta-lactam antibiotic and cationic oligopeptide, useful against Enterobacteriaceae, Pseudomonas aeruginosa etc.
                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                    This is a specific example of a cationic oligopeptide suitable for use in compositions with beta-lactam antibiotics. The peptide has an alpha-helical structure and is believed to act as an ionophore, making holes in bacterial cell membranes. The peptide and antibiotic act synergistically. See AAR13924-R13930 and AAR13936-7. (Updated on 25-WAR-2003 to correct PA
                                                                                                        Compsns. for treating infections sensitive to beta-lactam antibiotics - comprise beta-lactam antibiotic and cationic oligopeptide, useful against Enterobacteriaceae, Pseudomonas aeruginosa etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBABXBAB and its derivatives selected from XZBABZBABAB, BXZXB, BXBXZBBAB and ibs derivatives
                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antimicrobial, metapeptide; PMP-2; platelet microbicidal protein;

The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of leukocytes against organisms such as bacteria and fungi. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ij
a second peptide template XBBXX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBZXXBB, and XBBZXXBBXXBBXXXBBXXXBBX, where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid, Z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptiosis of microbial cells. AAX57463 to AAX57557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antimicrobial peptide composition for the prevention and treatment infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;

The invention relates to a novel isolated peptide which is 5-23 amino acids in length, and comprising phenylalanine, leucine, alanine or lysine residues, or contains at least 50 % of the residues. The peptides of the invention have antibacterial, fungicide, cytostatic, and vulnerary activity. The peptides are useful in treating cancer, cystic fibrosis or and, or proliferation of human fibroblasts and lymphocytes, promoting wound healing, and in enhancing the activity of a therapeutic agent. The sequences shown in ABR00759-ABR00923 represent the bioactive peptides of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated peptide for treating cancer, cystic fibrosis, wounds or acne, inhibiting growth of microbial cells, or promoting proliferation of cells, comprises phenylalanine, leucine, alanine or lysine residues.
                                                                                                                                                                                                                                                                                                                                                                                                               Antibacterial; fungicide; cytostatic; vulnerary; cancer; cystic fibrosis; acne; antimicrobial; human fibroblast; human lymphocyte; wound healing;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
              minimizionial peptides and useful as includical and includial against bacteria and fungi, agents in combinations with other antimicrobials, agents that enhance, potentiate or restore efficacy of conventions a nimicrobials, agents that enhance the antimicrobial functions of leukocytes, as disinfectants or preservatives for use in biology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of devertion of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is a specific example of a cationic oligopeptide suitable for use in compositions with beta-lactam antibiotics. The peptide has an alphabatical structure and is believed to act as an inonphore, maxing holes in bacterial cell membranes. The peptide and antibiotic act synergistically. See AAR13924-R13930 and AAR13936-7. (Updated on 25-MAR-2003 to correct PA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       comprise beta-lactam antibiotic and cationic oligopeptide, useful against
Enterobacteriaceae, Pseudomonas aeruginosa etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Compsns. for treating infections sensitive to beta-lactam antibiotics

Query Match

```
The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acid correspondence (derived from 150 amino acid correspondence) for sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers.

Cruncations, extensions, combinations, funions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial peptide objective against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents to improve efficiency of molecular of foods and cosmetics and as agents to improve efficiency of molecular of foods and cosmetics and as agents to improve efficiency of molecular or foods and cosmetics and as agents to improve efficiency of molecular or bean considered to have undesirable toxicity, immunogenicity and short convertions netured antimicrobial peptides that they present invention convertion are based upon natural antimicrobial peptides that have potent and broad enter and experiment and proad are based upon natural antimicrobial schild antimicrobial peptides that have potent and some protein and proad are based upon natural antimicrobial peptides that have potent and broad entermined antimicrobial peptides that have potent and protein and protein and protein antimicrobial peptides that have potent and protein and proper protein antimicrobial peptides that the peptides that the protein and protein and protei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antimicrobial peptide nRP-1:cRP-13 SEQ ID NO:46.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 53; DB 5;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    *****
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBBB and its derivatives selected from XZBZBXBBXB. BXZXXB, XBBXZXBBX and BBXZBBXZ; and (b) a second peptide template XZBZXXB, XBBXZXBBX and BBXZBBXZ; and (b) group consisting of XBBXBBX, and their derivatives selected from the group consisting of XBBXBBX, BXXXBXB, XBBZXXBB, and XBBZXXBBXZBBX; where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAY57463 to AAY57557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antimicrobial peptides for potentiating antimicrobial agents active
                                                                                                                  Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

organisms such a pacteria and fungi. The AB comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XXBZXBEXB and its derivatives selected from XZBZBEXBEXB. BXZXXZB, BXZXXBBX and BBXZBBXZ; and (b) a second peptide template XBBX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, XBBXXBBX, XBBXXBBX, ABBXXBBX, and their derivatives selected from the XBBZXXBBXXBBXXBBX, where B = at least one positively charged amino acid, x = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acid. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAVS7463 to AAVS7557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                    Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.
